St Vincent's Catholic Primary School

To love, serve and learn as Jesus shows us

	 especially important in a subject such as PSHE, which often involves discussing feelings, thoughts, memories, families and, sometimes, sensitive issues. Prior to the start of the lesson, discuss with the child where they would prefer to sit. They may also prefer to enter the classroom first and get themselves settled, or after the rest of the class is settled. This may change depending on circumstances at the time; Seating plans are very important for the child with anxiety. Let them know before the lesson if the usual seating plan is due to change during the activity. Carefully plan groupings/pairings and be aware of who the child feels most comfortable with sitting next to and having them support them with their work; Ensure the child is prepared and knows what to expect prior to the lesson. This may include a list of vocabulary that will be covered, the activities involved. If a supply teacher (or another member of staff) is covering a lesson, ensure that the child is made aware of this, so that it is not a surprise to them. Consider the use of a 'help' card, which the child can use if they feel anxious/overwhelmed, so that they can go somewhere they feel safe to calm down.
Autism Spectrum Disorder	 Classroom environment/set up: A child with ASD may find PSHE a particularly challenging curriculum area, however, using some of these strategies may help provide the environment for them to feel safe and secure in order to access some of the activities: Take time to build a good, trusting relationship with the child. This will also help adults understand the most appropriate way to respond to any behaviour, at a given time; Ask the child where they would prefer to sit in the classroom. Avoid changing this seating plan without plenty of warning, as this could cause anxiety. Think carefully about who is sat near to the child, as they may feel uncomfortable around certain children who may be a 'trigger' for them; When planning group work, ask the child who they would prefer to work with, or offer the chance to work by themselves (or with their TA). Ensure that groups/pairs are carefully planned to provide supportive/positive role models; Ensure that both the child and their TA are prepared for what is coming up next and what the lesson is about, so that they know the expectations. Ensure you pre-warn the child (and TA) of any changes, to avoid anxiety and allow them both time to prepare for the change; Be mindful of sensory processing difficulties and ensure the learning environment is neither over, or under, stimulating for the child; Provide a safe, familiar breakout space for the child, so that they can have sensory breaks when needed; If the child's behaviour becomes challenging, it is important to remember that this is often communicating a need, or difficulty. Look beyond the behaviour and ask for support from the SEND team if necessary. Sometimes, the child adoes it look like they are taking any notice of this they may still be taking it in; Role model and encourage positive and supportive behaviour to the child's peers. At times, the child may call out or try to make the class laugh etc.

	Explain to the class how important it is that they don't react and that this will help the child to remain focused and calm.
	 Resources and equipment you might consider before the lesson: Give instructions using tick lists, breaking down the task into manageable chunks; Provide vocabulary, structure, or starting ideas for the lesson. Use visuals and structured tasks, incorporating the child's own interests wherever possible. Find out which ones work and use them all of the time, even if it doesn't seem that the child needs them; Consider the use of 'speech to text' technology, so there is less writing; Allow the use of fiddle toys in class. The child may also prefer to sit on a gym ball/wobble cushion/special seat to provide sensory feedback and help them self-regulate and focus; The child may choose to do the work in different orders, or at a different time of the day to suit them (in discussion/negotiation with their TA). Provide additional resources, such as printouts of PowerPoint slides, word banks etc. so that the child has access to the same supporting resources as the rest of the class would have had during the lesson. You might also consider providing a simple lesson plan breakdown for the TA to follow, in case the child was out of the room during the input part of the lesson; Some of the lesson plans for PSHE may be suitable to be adapted to social stories, as a familiar way for the child to access the learning intensions for
	 the lesson. Teaching methods to consider: Avoid open-ended questions; Provide time to process information; Encourage the child to demonstrate/present their learning in alternative ways which suit them; Provide clear timelines for when things need to be achieved and make expectations really clear (i.e. how many sentences, how many pieces of work etc. to be completed in a time frame, or before a reward is achieved).
Dyscalculia	 Although maths is unlikely to be focused on during a PSHE lesson, some of these strategies may still be applicable and worth bearing in mind as things to try. Resources and equipment you might consider before the lesson: Provide written instructions, printed diagrams and personalised worksheets with a worked example (where appropriate/relevant) for the child to follow, to help them keep up in class; Tracking from the whiteboard to paper may be difficult. Share the lesson with the child, so they can follow it on a laptop (if used); Provide print outs of diagrams and visual support in lesson Teaching methods to consider: The child may work slower than peers. Be sensitive to this and supportive of any additional time/repetition they may need; The child may become easily overwhelmed and anxious; they may shut down and employ avoidance strategies. You can interrupt this cycle by
Dyslexia	 scaffolding the child's work and supporting them. Be supportive of the child if they don't want to read aloud in front of the class (either offering to read it for them, asking a friend to read it, or checking with them had any life to read it is along allowed.
Dyspraxia	 them beforehand if they would like it shared). Classroom environment/set up: Provide a large space for the child to work in. This will allow the child room to move and remain active when completing a task. They may also prefer to stand when handling any equipment/physical resources. Resources and equipment you might consider before the lesson: Provide part-prepared handouts to reduce unnecessary writing and lists of key concepts; or vocabulary;

	 Consider alternatives to writing – word processors, Dictaphones, scribe etc; Special equipment e.g looped scissors, rulers with handles etc may help; Provide a lesson breakdown and tick list to help the child organise their time and take responsibility for their work; Write instructions for any activities, using different colours for each line; Provide templates with headings to help the child structure their work; Prepare diagrams to label, as copying and drawing neatly can be challenging; Provide an equipment list and encourage the child to only get out what they need.
	Teaching methods to consider:
	Clarify rules and expectations, using unambiguous language;
	 Allow extra time to complete work, with movement breaks when needed; Allow time to settle, especially if the lesson is after a breaktime/ lunchtime, as transitions are challenging;
	 Give the child plenty of warning that the lesson is due to end and allow them additional time to pack up to leave (or get ready for the next lesson).
	 Provide any important information/instructions about the lesson in writing, as well as verbally. In addition, provide (in a written format) any lists of subject specific vocabulary and technical terms;
	 Consider sharing the lesson with the child's laptop (if they use one) and allow them to use headphones and the built-in assistive technology. Teaching methods to consider
	Repeat clearly any questions asked by other students in class before
	giving a response;Assist with lip reading by doing the following:
	 ensure your face is clearly visible at all times when speaking and sitting
	directly opposite the child whenever possible;
	 seating the child so that they can see others in the class (where
	 possible); ensuring the lighting is adjusted so that it is not too dark; providing written materials for all lessons, so that the child is not having to lip read and
	 take notes from the whiteboard; Be aware of the specific circumstances for the child and adapt
	accordingly.
	 For example: if they acquired their hearing loss early in life, they may have associated literacy issues and need additional support with reading and interpreting information. If they have associated speech issues, they may need support with reading out their work, or may preferred adult to read it for them
	Classroom environment/set up:
	• Speak to the child privately, before a lesson begins, to find out where they would prefer to sit and if there is anything else that can be done to help them; Discreetly check that the child is wearing a hearing aid (if applicable) and frequently check-in with the child that they are hearing and understanding;
Hearing Impairment	• Be aware of seating arrangements to suit the child's specific needs, for example if they are reliant on lip reading etc (ie seated towards the front of the classroom with an unobstructed view, or with their good ear facing outwards into the classroom);
	Ensure that any background noise is minimised and control class/group
	discussions, so that only one person is speaking at once; Resources and equipment you might consider before the lesson:
	Ensure any videos/films used are captioned, or a suitable alternative way
Telletherete	Classroom environment/set up:
Toileting Issues	Let the child leave and return to the classroom discreetly and without

having to get permission whenever they need the toilet (
if appropriate);	use a 'toilet pass
 Sit the child close to the door so that they can leave the or discreetly; 	classroom,
 Appreciate that they may arrive late for lessons because 	of an urgent
need to use a toilet;	
 Be aware that the child may need to take medication duri and/or need extra meal breaks and provide a discreet/co 	
for them to do this;	
Respect the child's need for privacy. They should decide	how much
teachers and other pupils are told about their condition.	
 Resources and equipment you might consider before the lease If the child has a diagnosed medical condition, they will h 	
Healthcare Plan. Please make sure that you are familiar document.	
The SENCO can give you access to this; If the child has	
issues, they will have an Intimate Care Plan. Please mak are familiar with this document. The SENCO can give you Teaching methods to consider:	5
 During more active sessions, try to be alert to the child's 	psychological
needs and relationships with other children. Let them jud	ge for
themselves if they wish to join in on a day-to-day basis -	-
trying whatever they want to try. However, be aware that also try to push themselves, so that they don't let others	
of this and offer discreet support when/where needed;	
Bending and stretching may bring on pain, or make pain	
 Teambuilding type activities/games can be particularly pr Be mindful of other students teasing the child about my l 	
or their need for extra rests (for example during group ac Building	
 If the child is unwell at school, consider giving them time 	to rest rather
than sending them home – they may be able to return to	
the day. Classroom environment/set up:	
Keep your classroom visually uncluttered and reduce the	e number of
objects in the immediate working area;	
Be mindful of seating arrangements and discuss any pre- the child. For example, they may prefer to work at close of	
as sitting closer to the board), or move the object closer t	· ·
people getting closer when talking);	
Be aware of the specific circumstances of the child, for e	
are sensitive to light and glare, control the light in the class blinds, sit the child with their back to windows and reduce	
Visual Impairment surfaces;	
The child may need to be seated near natural light, where	
child may need to use a lamp, which should be places be shoulder on the opposite side to their writing hand and/or	
side of their stronger eye;	
They may need to wear a hat/visors, or sunglasses even	
indoors. Be sensitive to this and mindful of other pupil's or reactions surrounding this;	comments/
 High contrast objects/pictures may be beneficial. As bes 	t practice on
handouts/presentations, black & white give the highest co	ontrast. Do not
use dark colours together (like blue and green). Avoid us	
 Carefully consider any pairings or groupings and include communication role models for the child to copy; 	good
	hild makes at

• Listen carefully to what the child says, so that they don't need to repeat
themselves;
 Provide a low distraction/quiet area for the child's group/pair to work so
 they can focus on their communication; Regularly check understanding and encourage the child to identify what
they can/cannot understand.
 Resources and equipment you might consider before the lesson:
 Use signs, symbols and visual timetables to support communication;
 Use visual displays (objects and pictures) that can be used to support
 understanding;
 Provide a visual guide to the lesson, e.g. a check list, or pictures to
aid understanding.
Teaching methods to consider:
 Be aware of the specific communication difficulties the child may have - it may be a processing disorder;
 Be aware of the level of language the child is using – use a similar level
to ensure they understand;
 Do not rush, or interrupt the child as this means they have to begin
processing all over again from the beginning, causing frustration!
 Slow down your rate of speech by using pausing and give the child lots of
time to process and reply – be prepared to wait for an answer;
 Allow time for the child to finish what they are saying, don't finish it for them:
 them; Keep language simple by breaking long sentences into short separate
ideas;
 Provide plenty of repetition (activities and vocabulary);
 Use non-verbal clues to back up what you are saying eg: gesture;
• Ensure adults are providing a clear language model and expand what the
child says, by repeating their words back to them correctly, without
pointing out their errors;
 Reduce the number of questions you ask and make sure you give time to answer:
 If you do need to ask questions in front of the class, try to use closed
questions, as these require only a 'yes'/'no' answer, which will reduce
anxiety.
Motor tics of the eyes, head or neck may interfere with reading and affect
handwriting, or the ability to write for prolonged periods of time; Motor and
vocal tics may make the child reluctant to read aloud, ask/answer
questions, or ask for help. Be understanding of this and support the child to feel involved and able to participate;
 Thought tics inhibit auditory processing. Be mindful and do not assume
the child is intentionally not listening.
• Tics can be triggered, or increased by stress, excitement or relaxation (all
of these emotional states may be experiences during PSHE type
activities and lessons, especially as some of the subjects covered may be
of a sensitive nature).Ensure that all adults in the room are mindful to filter out their emotional
 Ensure that all addits in the room are mindra to filler out their emotional reaction and instead listen and respond with support and understanding.
It is not helpful ask the child to stop their tics, as they are involuntary.
Being asked to suppress them is stressful and will cause an increase in
the tic. Furthermore, it will mean the child is unable to engage with what
is going on around them. Similarly, try not to ask the child not to do
something, as it will instantly turn into a compulsion. Because TS can be suggestible, if classmates discover 'the trigger', they may use this to
make the child tic. Please try and prevent this happening; Ignoring tics
avoids drawing any unnecessary attention towards them; Teaching
methods to consider: The child may have a poor attention span, fail to
complete tasks, be easily

	 distracted, unable to listen, fidgety and impulsive. To support them, provide a structure (schedule/tick list) to assist with planning, organisation, time management and initiation of tasks; Be mindful when planning activities, that the child may experience sensory processing difficulties, where they may be either over responsive, or under responsive to sensory stimuli, eg: noise, clothing, textures
Experienced Trauma	 Classroom environment/set up: Ensure you are very familiar with the child's past experiences and context, as this will help you understand their behaviour; Ensure all classroom adults take a non-confrontational, trauma-informed approach. A discreet, understanding and reassuring approach from all classroom adults is vital; Provide a safe, consistent and warm classroom environment. Incorporate as many opportunities for humour and laughter in lessons as possible (as laughter reduces the traumatic response in the brain); Ensure the school day has clear expectations for behaviour and structure, as this will help provide a predictable environment, necessary for the child to feel secure enough to participate and access the learning; Classroom adults need to be emotionally available and able to support and coach the child in ways to calm themselves and manage emotions, as well as opportunities to practise de-escalating when they feel overwhelmed; Ensure adults are vigilant to and mindful of any trigger points for the child, as this will help de-escalate emotional situations; Very carefully check through the lesson content prior to the session and look at it through the eyes of the child's context and background. There may be obvious trigger points in the lesson, which may not be so clear from the outside. Ensure that the classroom environment, available adults and overall support for the class as and an familiar breakout space for the child to use during times when they feel overwhelmed or emotionally dysregulated. The child may also need access to a space to exercise, so that they can have regular learning breaks; Consider the use of a 'help' card (or small item) for the child to use to signal that they are finding the situation tricky, without having to vocalise any details; Have consistent expectations and behaviour plans in place that are based on reward systems, not punishment. Teosider the use of a 'help' card (or small item

	 Ensure you use plenty of positive reinforcements, rewards, role modelling with the child (while actively ignore any negative behaviour); Use collaborative problem-solving during activities, so that the child feels in control.
Visual Impairment	 Classroom environment/set up: Keep your classroom visually uncluttered and reduce the number of objects in the immediate working area; Be mindful of seating arrangements and discuss any preferences with the child. For example, they may prefer to work at close distances, (such as sitting closer to the board), or move the object closer to them, (such as people getting closer when talking); Be aware of the specific circumstances of the child, for example: - If they are sensitive to light and glare, control the light in the classroom using blinds, sit the child with their back to windows and reduce the glare on surfaces; The child may need to be seated near natural light, where possible; - The child may need to use a lamp, which should be places behind their shoulder on the opposite side to their writing hand and/or on the same side of their stronger eye
